Re: WC Docket No. 05-196/911 Compliance Status Report

Dear Ms. Dortch:

1. Telesphere Networks Ltd. ("Telesphere") provides converged network services to business customers. Most of these customers receive their services over a private circuit and not via the public internet. Interconnected IP Telephony services (i.e., "VoIP") are a part of Telesphere's services. Most of Telesphere's customers have multiple phones at each location, and Telesphere provides hosted PBX services to each of its VoIP customers.
2. Telesphere's customers are businesses, some of which have multiple locations around the United States. 100% of these customer locations have 911 service through automatic routing of 911 calls to the appropriate PSAP in compliance with the VoIP 911 Order.
3. Telesphere has contracted with a third party to provide 911 service to all of Telesphere's customers in the United States. All 911 calls made by such customers are transmitted to the appropriate PSAP using the Selective Router and the trunk lines between the Selective Router and the PSAP in those areas in which Selective Routers are utilized. Automatic number identification (ANI) and automatic location identification (ALI) are transmitted via the wireline E911 network to all answering points that are capable of receiving and processing this information.
4. Customers who were activated prior to November 28, 2005 (some of which did not have 911 service on November 28, 2005) added phones after that date, but all of such customers now have 911 service, as described above. Telesphere offers 911 service in all areas in which it markets and/or accepts customers.

Sincerely,

Dennis James, Chief Operating Officer
